For years, people had to use very specific enzymes to cleave off one sugar at a time from a glycan structure, analyze it by using something like a lectin to probe the glycosylation pattern, and re-digest it with another specific enzyme and repeat the process over again many times just to try to figure out the structure of the glycan. It's never just a single person; everyone's standing on someone's shoulders. JenniferAshtonexplainswhattheproperamountofleanproteinshouldbeal
adults don't know how much protein they should be getting. The nature of N-linked glycans attached to a glycoprotein is determined by the protein and the cell in which it is expressed.
