However, the fill material is still necessary to support the curing concrete. View all subjects More like this Similar Items. To learn more, view our Privacy Policy.

In-situ concrete slabs are built on the building site using formwork - at type some special cases, the thermal properties of concrete have been employed, for example as a heatsink in nuclear power plants or a thermal buffer in industrial freezers. It is an economical and quick construction method for sites that have non-reactive soil and little slope.
