Electronics for Radiation Detection (Devices, Circuits, and Systems)

solid-state electronics,; front-end electronics for radiation
detectors, is focused on radiation damage in semiconductor
detectors and other semiconductor devices and of circuits and
system for readout of semiconductor microstrip detectors.

The RDG has considerable expertise in the design, fabrication,
and Flip-chip packaging of silicon radiation detectors for
strip and pixel sensors and has developed a novel technology
of double-side 3D detectors. The conference scope extends from
millimetre wave devices, components and systems to infrared
detectors and instruments, encompassing micro-scale structures
